A History of Innovation

At Advanced Energy, our engineers have been designing and developing power supply products for more than 40 years. Our products have helped pave the way for advancements in numerous applications in the communications, industrial, computing, data storage, and healthcare markets.

When developing products, time is money. Every step in the process that you can eliminate, speed up, or make more effective accelerates your time-to-market and lowers your R&D costs.

Major advantages of partnering with us include:

- Broad portfolio of power supplies
- Highly versatile power supplies
- Modified standards and value-add services
- Low energy consumption
- Energy-efficient products
- Space-efficient power
- Reliability and quality
- Worldwide distributor network
- Vast knowledge, experience, and expertise

**Accelerate, Improve, and Enhance the Capabilities of
Your Next System Design.**

Advanced Energy utilizes the following design methodologies and techniques to ensure that our power supplies meet the rigorous quality and reliability requirements of the communications, industrial, computing, data storage, and healthcare markets.

Power for the Next Generation

Many of our products incorporate powerful programming, monitoring, and self-testing software providing system engineers with critical data to manage power consumption. High efficiency, green design and manufacturing technologies, and innovative supply and demand systems collectively deliver key business efficiencies and new design capabilities.

Advanced Energy can help take your new product design or redevelopment efforts to the next level with a shorter time-to-market, higher reliability, and greater scalability.

- **Shorter Time-to-Market** – our latest programmable power solutions and our modular, medium/high power μ MP and iMP series provide you with shorter time-to-market and offer faster test and qualification than traditional analog power solutions. Our modified standards and value-add services also provide turn-key solutions for the best application match to help accelerate time-to-market without compromising quality.
- **Higher Reliability** – moving from inflexible fixed-output analog power supplies to programmable power solutions enables our engineers to more extensively test and document our products to ensure they meet or exceed your reliability requirements. We also provide a wide range of environmental, EMC compliance, and safety certifications to help speed your product design process.
- **Greater Scalability** – many of our latest power solutions are scalable, programmable, and plug-compatible with our earlier-generation products, enabling you to quickly address changes or enhancements to your systems. You can now satisfy most changes in power requirements by reprogramming the power supply and, if you needs change radically, you can easily swap to a more capable solution. This inherent scalability eliminates redesign costs, reduces testing time, and provides you with greater design flexibility.

Power Supply Design Controls

Reliability Models and Predictions

- A prediction of design reliability in terms of Mean Time Between Failures (MTBF) using Telecordia, Bellcore, or MIL-HDBK-217F
- Not intended as a measure of expected field performance, but for design trade-off analysis and review of part stress derating performance

Failure Modes and Effect Analysis

- An analytical technique to identify and review failure modes, their causes, mechanisms, and effects
- Provides a formal risk assessment to reduce field failures at the customer site

Component Selection

- Database warehouse of all component information
- Design engineers can only select components rigorously approved from suppliers that have undergone strict qualification and auditing process

Derating Analysis

- Intended to reduce the failure rate of components

Design for Manufacturability

- Design rules regarding manufacturability

iTS Electrical Specifications – Housekeeping Power Supply Module

Parameter	Value
AC Input Voltage	90 to 264 VAC
AC Input Frequency	50/60 Hz Nominal
AC Input Fusing	Included for both input AC lines (Not user serviceable)
AC Inrush Current	Upon start-up from a "cold start", the maximum AC input current shall not exceed 50 A at 264 VAC 25C
Output to Relay Module	12 V @ 1 A per module; 3V3 as reference voltage ±1%

ITS Electrical Specifications – Relay Module	
Parameter	Value
Description	The relay is double break, capable for 25 A max continuous operation. Both output lines, positive and return, are switched. To prevent arcing, the relay is only switched when zero voltage / zero current is flowing through the contacts (Provided by master software control of the power source and Relay MCU.) The relay module shall support iHP modules with Nominal voltage rating of 125 VDC, 200 VDC and 250 VDC along with the 250 VAC output of the LCM4000HV. iHP modules connected in series for higher voltage output is allowed, but the load maybe derated so as Not to exceed the switching power rating of the relay
# Inputs	One per relay module, up to 8 can be loaded in a single 2U rack
Nominal Input Voltage	125 to 250 V
Input Current Max	25 A
Input Current Fault	>28 A

¹ The rectifier droop voltage (0% to 100%) is 1 V by default (with the tolerance of ±0.125 V). That means output voltage is 49 V at 100% load and 50 V at no-load. The droop extends linearly to 150% (it means at 150%, the droop is 1.5 V, and voltage is 48.5 V).

Rapid Modified Standards Solutions

Time-to-market, reliability and costs have the greatest impact on your ROI. Fully custom solutions can delay your time-to-market and undermine your competitive advantage. Avoid paying custom development costs with an Advanced Energy modified standard power supply.

While Advanced Energy's Artesyn, Excelsys and UltraVolt product lines offer a broad range of standard products that address the needs of many industries, there are occasions when a standard product does not address all your application requirements. A custom solution may not be economical or meet scheduling needs. By using proven standard platforms as building blocks, Advanced Energy can develop cost-effective turnkey power solutions that meet your exact needs.
