Advanced Energy’s Artesyn DS2400SPE series power supply features an input range of 90 to 140 VAC, and 180 to 264VAC. It employs active power factor correction to minimize input harmonic current distortion and to ensure compliance with the international EN61000-3-2 standard - they have a power factor of 0.99 at full load. The power supplies also feature active AC inrush control, to automatically limit inrush current at turn-on to 45 A maximum.

**SPECIAL FEATURES**
- 2400 W output power at high line
- High power and short form factor
- 1U power supply
- High density design: 62 W/in³
- Active power factor correction
- Inrush current control
- 80 plus platinum efficiency
- N+1 or N+N redundant
- Active current sharing
- PMBus compliant
- Two-year warranty

**COMPLIANCE**
- Class A Conducted/Radiated EMI
- RoHS

**SAFETY**
- UL/cUL 60950 (UL Recognized)
- IEC 62368-1
- DEMKO+ CB Report EN60950
- EN60950
- CE Mark
- UKCA Mark
- BIS, BSMI, KC, EAC

**AT A GLANCE**

**Front-end Bulk Power**

**Total Output Power**

2400 W continuous at high line
90 to 140 VAC & 180 to 264 VAC

1 Minimum current for transient load response testing only. Unit is designed to operate and be within output regulation range at zero load
2 Output voltage will stay within regulation during a 50% step load with a minimum starting load of 10A. Current slew rate is 1A/µS
3 Latch mode
4 Auto-recovery
### Control and Status Signals

<table>
<thead>
<tr>
<th><strong>Input Signals</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PSON_L</strong></td>
</tr>
<tr>
<td>Active LOW signal which enables/disables the main output. Pulling this signal LOW will turn-on the main output.</td>
</tr>
<tr>
<td><strong>V_IL</strong></td>
</tr>
<tr>
<td>Input logic level LOW</td>
</tr>
<tr>
<td><strong>V_IH</strong></td>
</tr>
<tr>
<td>Input logic level HIGH</td>
</tr>
<tr>

</tr>
<tr>
<td>Current that may be sourced by this pin</td>
</tr>
<tr>
<td><strong>IS_SINK</strong></td>
</tr>
<tr>
<td>Current that may be sunk by this pin at low state</td>
</tr>
</tbody>
</table>

| **PSKILL\_H**     |
| First break/last mate active HIGH signal which enables/disables the main output. |
| **V\_IL**         | MIN | MAX |
| Input logic level LOW. This allows for the power supply to be turned on | 0.8 V |
| **V\_IH**         | MIN | MAX |
| Input logic level HIGH. Immediately shuts down the power supply | 2.0 V |
| **IS\_SOURCE**    | MIN | MAX |
| Current that may be sourced by this pin | 1.0 mA |
| **IS\_SINK**      | MIN | MAX |
| Current that may be sunk by this pin at low state | 4.0 mA |

| **VSENSE\+_+, VSENSE\-_** |
| VSENSE\+_ and VSENSE\-_ lines are the remote sense lines for regulation. Each line will compensate for a maximum of 100 mV. |

<table>
<thead>
<tr>
<th><strong>Output Signals</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ACOK</strong></td>
</tr>
<tr>
<td>Signal used to indicate the presence of AC input to the power supply. A logic level HIGH will indicate that the AC input to the power supply is within the operating range while a logic level LOW will indicate that AC has been lost</td>
</tr>
<tr>
<td><strong>V_OL</strong></td>
</tr>
<tr>
<td>Output logic level LOW</td>

</tr>
<tr>
<td><strong>IS_SINK</strong></td>
</tr>
<tr>
<td>Current that may be sunk by this pin at low state</td>
</tr>
</tbody>
</table>

| **PWR\_GOOD / PWOK** |
| Signal used to indicate that main output voltage is within regulation range. The PWR\_GOOD signal will be driven HIGH when the output voltage is valid and will be driven LOW when the output falls below the under-voltage threshold. This signal also gives an advance warning when there is an impending power loss due to loss of AC input or system shutdown request. More details in the Timing Section. |
| **V\_OL**         | MIN | MAX |
| Output logic level LOW | 0.4 V |
| **V\_OH**         | MIN | MAX |
| Output logic level HIGH | 2.4 V |
| **IS\_SOURCE**    | MIN | MAX |
| Current that may be sourced by this pin | 2.0 mA |
| **IS\_SINK**      | MIN | MAX |
| Current that may be sunk by this pin at low state | 4.0 mA |
# CONTROL AND STATUS SIGNALS (CONTINUED)

## Output Signals

<table>
<thead>
<tr>
<th>Signal</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PS_PRESENT</strong></td>
<td>Signal used to indicate to the system that a power supply is inserted in the power bay. This pin is connected to the standby return in the power supply.</td>
</tr>
<tr>
<td><strong>PS_INTERRUPT</strong></td>
<td>Active low signal used by the power supply to indicate to the system that a change in power supply status has occurred. This event can be triggered by faults such as OVP, OCP, OTP, and fan fault. This signal can be cleared by a CLEAR_FAULT command.</td>
</tr>
</tbody>
</table>

ABOUT ADVANCED ENERGY

Advanced Energy (AE) has devoted more than three decades to perfecting power for its global customers. AE designs and manufactures highly engineered, precision power conversion, measurement and control solutions for mission-critical applications and processes.

Our products enable customer innovation in complex applications for a wide range of industries including semiconductor equipment, industrial, manufacturing, telecommunications, data center computing, and medical. With deep applications know-how and responsive service and support across the globe, we build collaborative partnerships to meet rapid technological developments, propel growth for our customers, and innovate the future of power.
