

IMPAC IPE 140/45

Addendum to IPE 140 Data Sheet

Special version of IPE 140 in a spectral range of the CO₂ absorption band.

The Impac® IPE 140/45 is a special pyrometer for the temperature measurement of hot, CO₂ containing combustion gas. The pyrometer is able to measure hot combustion gas (with typically approx. 10% CO₂) with a thickness of 40 cm.

Like the basic IPE 140, the IPE 140/45 is a highly accurate digital pyrometer. The narrow spectral range in the CO₂ absorption band enables the measurement of flames and hot combustion gases. For optimal match of the instrument to the application three different focusable optics are available.

PRODUCT HIGHLIGHTS

- Temperature range of 400 to 2000°C (752 to 3632°F)
- Measurement of flame temperatures
- Measurement of combustion gas temperatures
